Abstract: Bandung has become a popular destination for special interest tourism, for visitors with a particular taste for traditional delicacies. This research aims to analyse the effects of the quality of Bandung traditional cuisine, tourist's level of satisfaction towards the traditional culinary experience, and their level of satisfaction towards the destination experience on tourist's behavioural intentions. A questionnaire survey on the subject, which recorded 205 responds, was conducted and the results are further analysed using the SEM-PLS method. Findings indicate that, first, the quality of culinary experience prompts the choice of destination by contributing to perceived satisfaction; and second, the destination and culinary satisfaction may trigger tourist behaviour intention such as to revisit Bandung for its cuisine or as a leisure visit, or to recommend Bandung to their kiths and kins. To conclude, results of the study implied that the quality of culinary experience indirectly affects tourist behavioural intentions through culinary experience satisfaction and destination experience satisfaction of tourists.
